

ACTIVITY 11 - HOLIDAY IN WALES

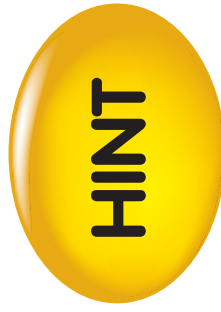

Jo, Rob and Rich are saving for their holiday in Wales. Rob has saved £27 more than Rich.

Jo has saved £13 less than Rob.

Altogether, the 3 of them have saved £107.

How much have each of them saved?

How many children? How many bars? What do you know about who has more than who? Is there some part of each child's savings that is the same for each child?
