

ACTIVITY 14 - AVALON'S SHELLS

Avalon gave Libby $1\frac{1}{3}$ of her shell collection. She had 18 shells left.

How many had she given Libby?

If she has given $1\frac{1}{3}$ away, how many thirds does she still have?

And how many shells is that?

- The original whole collection as thirds
- The third Avalon gave away
- The fraction she kept
- Anything else?
