

**ACTIVITY 14 - BUTTERFLY BUSH**

One summer afternoon, Laura noticed that there were lots of butterflies on one bush in the garden. Altogether there were 34 butterflies. 18 were Peacock butterflies; 5 were Cabbage Whites and the rest were Swallowtails.

**How many were Swallowtails?**

**HINT**

Draw a bar model to represent the numbers of butterflies – the different types and the total number. How many ‘parts’ must you split your bar into?
