

**ACTIVITY 15 - SHARING CRAYONS**

Victor and his little brother Robbie were arguing over a huge box full of crayons on the table and Victor agreed to give Robbie some of them. He gave Robbie a quarter of the crayons. Victor kept 36 of the crayons.

**How many did he give Robbie?**

If he has given  $\frac{1}{4}$  away, how many quarters does he still have? And that is how many crayons? So one quarter is...

How can you draw bars to show:

- The original whole boxful as quarters
- The quarter Victor gave away
- The fraction he kept
- Anything else?
