

ACTIVITY 19 - CENTURY FOREST

There are one hundred big old trees in Century Forest. There are three types of trees – oak, chestnut and silver birch. Forty trees are oak trees and there are thirty chestnut trees. The rest are all silver birch.

How many silver birch trees are there?

You know the total number of trees and you know that there were three different types. So you can draw a bar to represent those three types, showing how many of each, with a question mark for silver birch. What do you need to do next to be able to answer the question?
