

ACTIVITY 20 - LUCY AND PENNY GO TO THE PARK AGAIN

I took my 2 dogs, Lucy and Penny, to the park. At the start I had a bag full of 48 tennis balls and I threw them all but when we got home I found that there were 12 balls missing. Lucy is much better at 'fetching' than Penny and brought back twice as many balls as Penny.

How many tennis balls had penny brought back to me?

**HINT**

First, if you know how many balls are missing, you can work out how many the dogs did 'fetch'. Once you have drawn the bars to show the balls that the dogs brought back, you will be able to consider the proportions of that bar that were balls brought back by Lucy and by Penny and the number of balls those proportions represent.
