

ACTIVITY 25 - FEELING PECKISH

Meya and her Mum bought chocolate bars while they were out shopping on Saturday. Meya's chocolate cost 39p and her Mum's was 5p more expensive than Meya's.

What was the price for both chocolate bars?

HINT

Start by drawing a bar to represent Meya's bar. Then, below that, draw another bar to represent her Mum's bar. Should this be longer or shorter? By how much? How will you calculate the total?
