

ACTIVITY 4 - RORY'S BIRTHDAY PARTY

At Rory's birthday party, 12 children had a choice of vanilla, chocolate, banana or mango flavoured ice cream. The waiter's order pad got torn and when he got to the kitchen, the corner was missing from the page so he couldn't see how many children had asked for mango.

Can you help him?

You can't see from the order pad how many children ordered mango but you can work it out from all the other things that you know. What are the things that you know? Draw bars to show what you do know. There will be a section of a bar that you draw that you don't know the value of yet but you'll be able to see how to work it out.
