

ACTIVITY 7 - RABBITS

At the Children's Farm, the rabbits' pen is always a favourite with children of all ages. The rabbits move around a lot and it is difficult to count them all. There are 14 grey rabbits, 11 black ones and 9 white ones.

How many are there altogether?

HINT

You will need to draw a bar to represent all of the rabbits but you don't know yet how long it needs to be. Start by drawing a bar that represents the number of grey rabbits. Then make the bar longer, adding on a section that represents the black rabbits. What do you think you should do next? How will you work out the answer to the question? If you drew the sections in a different order, would the answer be different?
